

VMD
105

By Tiffany Zhu

Introduction

My name is Tiffany Zhu. I took VMD 105 because I want to expand my horizon in digital design since I've done fine arts when I was little. I want to lean towards becoming an illustrator, character designer, or any design career. I want to have the ability to utilize my skills with digital design. My typeface is Noteworthy and I chose pretty pink color and a little bit of soft yellow color as my background color because this works well with the theme of feeling sweet and everything nice. In the future, I will look back of how much I accomplished building my portfolios from taking this class.

Dreamer..

I was inspired by the idea of unicorn when I went to Museum of Ice Cream in San Francisco for the first time. What I did was manipulating elements from raster images and cropping myself on a unicorn. I love working with bright and pastel colors, so I tried including a lot of colorful elements on the sky and use the smudge and blend tool to blend with the sunlight, which gives this a fantasy feel. This gives a depiction of enchantment.

Raster final project

*Wish my
Desire*

by Tiffany Zhu

I always wanted to try logo design ,so I tried experimenting with Adobe Illustrator since they are good with creating logos. I went for a wedding themed logo design with a bride fairy that grants every couples' wishes of having a wedding. I tried shaping the bride fairy with shapes and pen tool, then I added details with the face, hair, and the dress with the pen tool. At the end, I relied a lot on group and pathfinder since they help group things together.

Adobe Illustrator

final project

This animation project was the most challenging project because of how much time this take to make the characters move. I had a terrible time creating different shots since the movements and angles doesn't go as expected, however what made me overcame this challenge was using the blank keyframe, and keyframe so that the motion tween doesn't move all over the place when positioning the elements. Overall this one was challenging, but fun.
